Date of Annual Sludge Inspection _____

Buildup (Y/N) _____

ADDITIONAL INFORMATION:

LWCF Critical Levels: Winter Level _____ Start Pump _____ Max Pool _____ Min. Treat. Vol. _____

Weekly LWCF Inspection (includes all impoundments, basins, lift stations & diversions):

- ▷ Liquid Levels must also be documented before and after pumping,
- ▷ Stockpiles must be covered or have a berm around them if there is any risk at all for runoff,
- ▷ Maintain > 30 ft. setback from streams, lakes, and impounded waters for stockpiled and applied waste.

It is recommended that a record of land application of waste also be kept.

Monitoring of the irrigation system is required during use.

Any discharge is to be reported verbally within 24-hours, with a written report submitted within 5 days after the end of the discharge (Discharge Notification Form attached)

Records are to be kept on site for 5 years

Additional LWCF Liquid Depth Readings
