Nebraska Department of Environment and Energy Petroleum Remediation Section

Tier 1 Pre-Investigation Assessment Work Plan Form

The Department has developed this document to simplify the petroleum release site investigation work plan review process. The completed form must be signed and dated by representatives of both the responsible party and the consulting firm selected to perform the work.

The Department requires that a pre-investigation assessment, including a site visit, be conducted prior to conducting a Tier 1 site investigation in accordance with most recent version of the Department's environmental guidance document, Risk-Based Corrective Action (RBCA) at Petroleum Release Sites: Tier1/Tier2 Assessments and Reports. The methods outlined in the guidance document must be followed unless alternatives are approved in advance by the Department. The purposes of this assessment include, but are not limited to:

- 1. Conduct an on-site reconnaissance to determine potential source areas and potential complications for sampling the source areas;
- 2. Locate any water supply wells and surface water bodies within 500 feet of the site;
- 3. Locate utilities, buildings, and basements within 200 feet of the site as an aid in determining potential site complications;
- Determine the enprengiate compline and/or drilling locations to obtain the required Tier 1

ing and/or drinning locations to obtain the required	Tiel I
